Soccer Statistics Analyzer – Eisenhower Matrix

	Urgent	Not Urgent
Important	**DO – MVP (Version 1.0)**	**SCHEDULE – Version 2.0+**
	1. Add players and manually enter statistics (goals, assists, appearances).	1. Import real player statistics from an online soccer API.
	2. Save player information to a file and load it when the program restarts.	2. Create graphical charts to visualize player performance.
	3. Search for players by name or team.	3. Add advanced statistics such as goals per 90 minutes and assists per 90 minutes.
	4. Compare two players based on their statistics.	4. Filter players by league, position, or season.
	5. Rank players by selected statistics.	5. Export comparisons and rankings to CSV.
Not Important	**DELEGATE – Use Existing Java Libraries**	**DELETE – Cut from Project Scope**
	1. Use Java's ArrayList to manage player records.	1. Build an online multiplayer comparison feature.
	2. Use Java's Collections library to sort player statistics.	2. Create user accounts and password authentication.
	3. Use Java's built-in file handling tools to read and write player data.	3. Develop a live soccer match tracking system.
	4. Use Java's Scanner class to handle terminal input.	4. Build a separate mobile application.
